

Newes from the Starrs:  
OR AN  
EPHEMERIS,

For the year of *Mans Redemption* by

Jesus-Christ, 1665.

Being the first from Bissextile, or Leap-year.  
And from the Creation of the World, 5614.

WHEREIN

You have the Motions and  
Eclipses of the Sun and Moon,  
the two great Lights of Heaven.

With the mutual Aspects of the Planets,  
and Observations thereupon.

TOGETHER

With Astrological Judgements, upon the  
Ingress of the Sun into the Aequinoctial and  
Solstitial points of Heaven;

Wherein is (also) discovered those various Actions  
and designs, which are intended by the heavens  
to be on foot in most parts of EUROPE.

Calculated for the Meridian of London,  
By WILLIAM ANDREWS  
Student in ASTROLOGY.

*Et prius et saevius semper dominabitur astris,  
Quae inclinata queunt, cogere sed nequeunt.*

LONDON Printed by Tho. Ratcliffe,  
for the Company of Stationers. 1665.

Unto this present Year 1665. It is accounted

	Years.
<b>Since the Creation of the WORLD</b>	5614
<b>Since Noahs Flood</b>	3958
<b>Since the building of LONDON</b>	2772
<b>Since the building of YORK</b>	2654
<b>Since the building of ROME</b>	2417
<b>Since the Death of Alexander the Great</b>	1988
<b>Since the Passion and Death of the Lord Jesus Christ</b>	1632
<b>Since the Hegira, or flight of Mahomet</b>	1074
<b>Since the destruction of Jerusalem</b>	1595
<b>Since England received the Christian faith</b>	1475
<b>Since the Danes first entred England</b>	647
<b>Since the Conquest by Duke William</b>	599
<b>Since St. Pauls Steeple was fired by lightning</b>	104
<b>Since the New Star in Cassiopeia obserued by the Noble Tycho Brahe</b>	93
<b>Since Tilbury Camp in Essex</b>	77
<b>Since the Powder Treason November 5</b>	60
<b>Since the Comet or Blazing Star Anno 1618</b>	47
<b>Since the Comet in 1652. obserued by the Learned Mr. Ongbsterd</b>	13

The Julian or Scaliger Period is, 6378.

## Of the Eclipses this year 165.

Five times this year will the Two bright Luminaries of Heaven be Eclipsed, viz. Thrice the Sun, and Twice the Moon: The Eclipses of the Sun cannot be any wayes seen in our Horizon of Great Britain; but those of the Moon will be visible to us (If the Clouds hinder not.) However, they are but small, the greatest of them being but fully 5. digits.

The first of these Eclipses will be of the Sun upon the 6. day of *Januar*. (Being Friday) about 7. of the clock in the morning in the 26 degr. of *Aquar*. This Eclipse cannot be seen of us, but it will appear in *Arabia* the *happy*, and in some of the adjacent places, and in *Ormus*, *Zacotosa*, *Pa'andare Insula*, and other places lying in the Indian Ocean.

The second Eclipse is of the Moon, and will be visible in *England* upon Saturday the 21 of *Jan.* in the morning (if the Skie be clear) the Moon being then in 12 degrees of *N.* This Eclipse may be observed in the Meridian of those people who are under the Longitude of 29 4 degrees, and about 29 minutes, as in *Nova Hispania*, *Gulf of Mexico*, &c. The Type of this Eclipse, with the beginning, ending, Total duration, and digits Eclipsed, you have in my Observations upon *Januar*, unto which I refer you.

The Third Eclipse is of the Sun upon the 16 of *July* in the afternoon, to be seen, not far from the *Aequator* in the Province of *Mexicana*, in *Nova Hispania*, *Granada*, *Gulf of Mexico*, and such places as are lying about the *Aquinocial* circle, and adjoyn to the *Peruvian* Ocean, the Sun being then in the 20th degree of *Sc.*

The Fourth is a very little Eclipse of the Moon, and will be visible in our Horizon (if the Air be clear) upon Sunday at night the 16 of *July*, the Moon being then in 4 degrees of *Aquarius*, whose Type, &c. you have also in my Observations on that month; to which I also refer you.

The fifth and last is a great Eclipse of the Sun upon the 26 of *Decemb.* about 9 of the clock in the morning to be seen in the South parts of *Africa*, in the Islands *Madagascar*, *De Los Romeros*, and in some more Western places, not far from the *Athiopian* Ocean, the Sun being then in the 15 degree of *Capricorne*.

The Use of the two ensuing Tide-Tables.

**T**O find the Time of Full-Sea, or high water in any of those places mentioned in the two ensuing Tide-Tables, you must observe, first, The Age of the Moon, which you may easily find in the next following Table, wherein you have the Moons Age every day throughout this year 1665. And having therein found the Moons age, according to those directions mentioned for that purpose in the side of the said Table, then have recourse unto the said Tide-Tables, and look for your place listed in the head of the Table, with the age of the Moon in the column under the title of The Moons age; and in the common angle, or meeting of those lines in the column, under your place, you shall have the time of high-water in hours and minutes.

Yet Note, That the Tides do not always fall out exactly at the time found in these Tables, by reason of the difference of the Moons latitude, High-winds, Land-floods, &c. which do often alter the Time; yet this is the exactest Rule which can be given for the finding of them; and so I refer you to the Tables themselves, which follow. A

A Table of the Moons age every day this year  
1665, whereby, with the help of the ensuing Tide-  
Tables the time of High-Tyde may be found in those  
places there inserted.

January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.

## Januaries Observations.

**T**HE influence of the conjunction of Saturn and Mars, in November, and of Jupiter and Mars, in Decemb. last, will now begin to operate in Europe; and in the Spring quarter, will be more fully manifested in several Countries. The actions of this month, and some others succeeding, doth highly concern the Emperors dominions, and the Spanish Nation. A noise, as if some sudden Military Stratagem, at or near this time, did somewhat startle some European Countries. In the East and Northeast parts of the world dittemper may be feared. Superlative matters are now in agitation, both in the East & West Indies. From the coasts of Barbary, Tangier in Africk, we may expect to hear of some very considerable actions, or from Jamaica, Barbadoes, or other foreign plantations.

The 21. day the Moon is eclipsed in this manner.

The beginning thereof will be at 3 min. 21 seconds past 4. of the clock in the morning. The greatest obscuration at 9. min. 25 seconds past 5. and the end at 5. min. 29 seconds after 7 of the clock in the morning. -- The Total duration will be 2 hours 12 min. 8 seconds. -- Digits eclipsed 4. 5 1/2 min. and 13 seconds. Great Consultations on foot in many Countries even in this cold month;

O New Moon the 19 day, 31 min. past 2 in the morn.  
 P First quarter the 12 day 52 min. past 11. at night  
 S Full Moon the 19 13, 37 minutes past 4 afternoon  
 E Last quarter the 26 day, 32 min. past 3 afternoon.

## Februaries Observations.

Sudden Stormes at Sea seem now to discourage the Noble Seaman upon the Southern Coasts, or boisterous weather this month, may put many ships at Sea in danger. The weather with us in England proved sharp in the other moneth, and now Snow, Rain in full measure, and very cold Northern winds, at or about Shrovetide may be expected — Treacherous actions near manifestation, and a discovery of some secret, close, rebellious contrivances, in some parts of the world — unquiet Spirits may now suffer for their folly. The Partial Eclipse of the Moon in January, doth in some measure threaten Rome, Italy, and the places adjacent, with some unpleasing designs; though the Effects thereof (I confess) will be but small, yet some misfters (it doth) to those places portend. Good News should now arrive from Portugal, from our English Ships and people in the Southern parts of the world. Saturn is an enemy unto all those Countries under Cancer all this year; and the Hollanders do find some discouragement in their Traffick into the Southern regions of the world. Intelligence from Germany, France, Hungary, importing somewhat of consequence: from those kingdomes and countries under Aries we may expect to hear of very material passages touching their grand affaires — The factious Spirits in all places will ere long smart for their miscarriages. Saturn molests Venus this moneth, and Mercury brings News unto Mars, and the Sun. Many Robberies frequently committed in many parts. The Eastern Countries suffer by war and famine.

## Marches Observations.

**M**atters of an high nature are this moneth upon the Stage of Europe, especially in the Oriental parts many troubles appear; we much fear that the Turkes near these times will molest and disquiet many Countries. The Aspects of the Stars both at the beginning of February, and this month of March seem to declare sundry and various Actions and designs to be carried on in several foraign Countries and Kingdoms. An appearance of some Sea action, or fleets of ships now setting forth: Sea fights near at hand. Our English Nation soars high, and his Majesties Navies, and Sea forces are prosperous in their undertakings. Hot disputes both by Sea and Land, in the Eastern and Northeast parts of the world. The effects of the Lunar Eclipse in July last year (if the doctrine of Prolomy be true) will begin now to be manifested, and sufficiently operate in those Regions and Cities, under the Triplicity wherein it hapned. Croatia, VVestphalia in Germany, the higher Austria, Alsacia, Lombardy in Italy, Piemont in Savoy, London in England, Spain, Bohemia, Moravia, Dalmatia, Slavonia, Silesia, Hungaria, Flanders, and many other Countries, Cities and Provinces, will be sensible of the influence of that eminent Lunar defect, &c. in the Spring quarter of this year. Great preparations for war in some of those Places, and in those parts of the world where Armies are continued, and the Soldier hath power, the Country people suffer many hardships, losses, troubles, afflictions &c.

## Aprils Observations.

Various reports now fly abroad, and much uncertaine Intelligence arrives; from France, Denmark, Sweden, Germany, and the Imperial Countries, we shall have an account of some very material designes (in those parts) now carrying on. Some scandalous Printers (perhaps) now suffer for printing, and dispersing unlicensed Pamphlets.

The Ottoman family is active, yet we hope their forces will receive some notable repulse ~~near these times~~. Could but Christians accord (throughly) amongst themselves, the work would not prove difficult — The Stars this month of April discover unto mankind many Robberies to be committed; or that much Thieving, house-breaking, and such like Actions, would now molest some Countrey people. Some secret, close seditious enterprises near discovery, and all rebellious persons shall be sufficiently made sensible, how dangerous a matter it is, to engage against Providence. Mars possesteth Aries, is strong, and tells us, that our English Nation shall prosper; and that our Gracious Sovereigns Forces and People shall thrive, in their publique designments. The French manage their affairs strongly; and at or about the Straights some thing of concernment may be looked for — Upper and Lower Austria seem threatened by the configurations of heaven, now operating. Much underhand dealing in some places in Europe nearer us; and clandestine actions brought to light, to the great terror of evill doers.

## Mays Observations, 1665.

**T**HE Country-matt and industrious Farmer, in many Counties of *England*, seem somewhat troubled, by reason of some unseasonable weather this moneth, which gives him cause to fear that his crops of Corn will be but mean this year. Indeed the wandering Stars now portend much unsettled weather, and many cold storms of rain and hale, not very comfortable to mankind. The *Hollanders* in their sundry Negotiations are much concern'd; the Heavens cast forth oblique and crooked Aspects upon those peoples affairs. From the North comes much news; from *Scotland*, *Sweden*, *Holland*, *Zealand*, and the *United Provinces*, arrives intelligence; so likewise from *Ireland*, *Poland*, *Russia*, and other parts of the world, &c. *Saturn* afflicts *Venus* and *Mercury* this moneth. Sudden shipwrecks may be feared, and loss at Sea, unto those Countries and Cities under *Cancer*. The *Algier* Pirates now suffer. The City of *Venice* in *Italy* much perplexed, or the *Venetian* Fleets at Sea subject to various fortune. Much discourse touching Sea-affairs. The Fenny and Moorish places Northward are afflicted with Agues, and many cold difficulties. The influence of *Saturn* will now appear. Sea-fights, or some quarrels betwixt some *European* Countries, may now be managed, and be fully discovered, towards the North and North-east, or some sudden strange breaches of the Sea banks may be shrewdly feared. The effects of the Lunar Eclipse in July 1664. will operate.

## June Observations, 1665.

In the Septentrional parts of the world, the Stars pour forth their malicious influence, in a very large measure; many difficulties in humane affairs; a distempered face of Heaven. Notable Actions upon the waters, or a probability of some Sea engagements, or Conflicts at Sea. The Weather with us is no ways pleasing, in regard of some sudden Flouds, or hasty Storms, which (now happen) in some parts of *England*, to the great prejudice of the laborious Country people. The *Dutch* Sea Forces in distress, or the *Holland* and *Zealand* Ships subject to many casualties. The Sun now enters *Cancer*, and *Mars* is placed in the Ascendant in *Gemini*. The *Turks* near these times find themselves in great danger, and *Constantinople* it self utider some sad afflictions. From the North, here appeareth much matters and things of importance: from the Coasts of *Africk*, come several rumors and reports—Great (are) the troubles and calamities, now impending over a perfidious, and unconstant, self-ended people in *Europe*—The Kingdom of *England* victorious, yea providence smiles upon the *English* in many parts of the world—Whilst the *Hollander* suffers by Inundations, Ship-wrecks, Sea-storms, and many other mischiefs. Many divisions amongst great persons in some Foreign Countries, some are imprisoned, and questioned for things of an high nature. The worthy Citizens of *London* have good Trading, and unless some violent Feavers afflict the younger sort of people, that City will be favoured by the Heavens.

## July's Observations, 1655.

**S**harp disputes and hot debates in the world. Rash actions, and the dispositions of many people in sundry places of *Europe* incline unto sedition and mischief. Many hateful and malicious Configurations now appear, all threatening no-good unto mankind.  $\text{h}$  and  $\text{g}$  are in Opposition, and likewise  $\text{h}$  and  $\text{g}$ , and  $\text{y}$  and  $\text{o}$ , and  $\text{y}$  and  $\text{g}$ : these Oppositions are of concernment. Certainly those Regions, Cities, and places under  $\text{g}$  and  $\text{y}$  are now much pointed at by the Celestial bodies. Poverty, losses, and misfortunes now attend some Countries in the Northern parts of the world, and in the Southern Countries many cross actions happen.

**A**n appearance of much trouble in some adjacent Provinces beyond Sea. — Great complaint for want of Trading, and a great want of Money amongst the Commonalty; several Fears seize upon the vulgar people; by reason of sad weather many are perplexed and molested in their Countrey-employments; very bad Hay-weather, some strange flocks, or many hasty and violent showres this moneth Northward, &c.

The Aspects of the Heavens — are harmful, destructive and pernicious; want of provision for mankind may be fear'd. The Low-countrey Territories are deeply sensible of the cross influence of the Heavens. Sea-fights, or slaughter of people upon the Seas; Castles, Forts, and houses demolished. Stratagems about the taking of Towns, Castles, and Forts: eminent actions on foot in *Ita*, yea even in the City of *Rome* — From the *Indies* there may be news (expected) of weighty importance.

## August's Observations, 1665.

Former underhand actions now visibly appear. A sufficient account is now given unto the world, of those malicious designs on foot in the other month : In the North parts of *Europe*, towards the *Sound* and *Baltick Sea*, some considerable action hath lately happened, & is now much discoursed of. News near this time comes from *Italy*, and many other Countries adjacent, from the Armies and forces of the *Ottoman* family: several reports are spread abroad ; we hope the Turks appear not so numerous as formerly, or that those Brutish people may now receive an overthrow. The French nation receive now much intelligence from their people in the South parts of the world— Various rumors concerning the Affairs now — in or near *Alsacia*, and some other remote Regions. Yea, even from *Austria*, &c. — No comfortable Intelligence may (we fear) be expected, rather an appearance of some sad disasters, may be feared, for *Vienna* suffers by famine or scarcity of provision, or Epidemical diseases in this month ( may probably) afflict the Inhabitants of that City. We shall (perhaps) now hear of the beleaguering of some Towns, Castles, and strong Forts, in some Foreign Kingdoms and Countries, whereof some will be basely surrendered. Towards the months end, in those places where Armies are on foot, The soldier draweth nigh unto some furious attempt— Though the weather in *July* was uncomfortable, yet the Stars give us hopes of a different Harvest weather this month of *Aug<sup>t</sup>*, to the comfort of the Farmer in many parts of this Kingdom.

## Septemb're Observations, 1665.

**G**reat divisions amongst the *Tartars*, *Muscovites*, and other people inhabiting in some remote regions. An Opposition of *Jupiter* and *Mars* this moneth threateneth the South parts of *Sweden*, with some untoward and turbulent actions. Sundry Commotions in the South, South-west, and North-east parts of *Europe*.—

No great union amongst the *Italian* Princes, nor is *Italy* it self free from troubles. The Dukedom of *Savoy* is also now full of disturbances, yea much disquietness may be probably in those parts at or near this very moneth. *Septemb're* Configurations, or the Aspects of the Stars at this time, seem somewhat more comfortable unto mankind, than in some former moneths. Yet the *Emperours* Territories seem not fully quiet; rather great divisions amongst some principal Officers or Great persons in *Hungaria*, *Austria*, and some other of His Imperial Majesty's Dominions, now begin to be manifested. Several overtures for peace in some forein Countries, and a more happy understanding betwixt some Nations than formerly. Honour now conferred upon some most accomplished persons of the *English* Nation. Actions both good and bad are signified; and although the whole Somer it self did appear somewhat violent and turbulent, (we mean, as unto the grand affairs of the world in general) yet we hope now that some National differences, formerly depending betwixt some forein Nations and Kingdoms, may be near some advantageous conclusion, &c.—

## Octobers Observations, 1665.

The Moon was void of course at the ingress of *Sol* into *Libra*, in the other month, and in truth the affairs of the world, in general, go on but slowly and dully; in many parts of the world there appeareth much treachery, many deceitful actions. Several Treaties now on foot, or much time now spent in some fruitless debates. Frequent news arrives from many Countries, and a great inclination of the minds of people in sundry places of *Europe* to peace and quietness; many differences near reconciling, and more unity amongst men in this month than formerly. The *French* Nation receives Intelligence very pleasant and comfortable, and many Kingdoms are favoured; the Celestial configurations import some good unto the house of *Austria*, and we do hope that the Imperial Forces may obtain some notable Victory, or have good success in their designments. The weather seems comfortable for this time of the year, and very seasonable, and the Country man may expect an indifferent good seed time for his Wheat, &c—

The Stars are in an handsome calm temper, and we doubt not but the fancies of people will be better regulated this month, and towards the latter end of this year 1665. than at the beginning, or at the Spring quarter — and unless some private and cuffing controversies manifest themselves in the Northern parts of *Europe*, we cannot discern any material busines to be expected or feared—

## November's Observations, 1665.

**A**S the heavenly bodies in October did in part manifest unto the world, a calm and serene time, we mean as to the general affairs and transactions of many Kingooms and Countries, so this moneth seems to pass quietly (alio,) and no very great material actions or designs seem intended by the wandering Stars to be manifested herein.— However, near these times many Negotiations are carried on for the uniting of some forein Countries, or much labouring for peace in sundry of the European Kingdoms, where war and contention have for some moneths past taken place.— We have now cause to judge the Imperial Countries to be in a good condition. *Hungaria, Austria, and those Countries of right belonging to His Imperial Majesty, (indifferently)* are aspected by the Heavens this moneth. The Christians now receive an encouragement: in the undertakings of some Regions happy success.—

Sober and discreet persons employed in making of some general peace, or some pious men are now strongly endeavouring to frame the dispositions of many Princes unto serious inclinations of peace; and, if the Consultations tending thereunto be not frustrated by some close and clandestine practices or designs, we hope some lasting peace may be now settled, confirmed, and ratified, to the comfort and benefit of deserving persons. The weather this moneth proves moderately seasonable, not very cold; nor doth the moneth appear furious or violent in any thing. News from the South and West comes very good.—

## December Observations, 1665.

The year is now drawing to an end, and the heavenly bodies inform the world of some hasty and unpleasant actions and designs, near or ready to break forth in those places and Countries under the Celestial Constellation *Sagittarius*. The Spanish Nation seems deeply concerned by the Aspects of the heavens this month of December—

*Dalmatia, Slavonia, Hungaria, Moravia*, and some other more remote Regions, are afflicted by War and its sad attendance—Several reports from those Countries, the French Nation are now prosecuting of some very eminent matters and things even in this month. Though the season of the year admits of no great action, yet here seems signified the motion of some Army or Armies in Foreign Countries; if the *Turk* continues in Armes still against the Christians, in the Emperors Dominions, then about the very latter end of this very year, 1665. we may expect to hear of some battle or dispute betwixt the Armies and Forces, in those parts of the world, bordering upon the *Turk*, or in those Countries under his Dominion—

Death, or some sad misfortune, deprives the world of some eminent person or persons in the *Indias*. The weather, quickly after the Suns ingress into *Capricorn*, will prove cloudy and cold with us in *England*, and so ends the year. *Deo gloria.*

*Cod bles his Majest and his thre Kingdoms.*

# ASTROLOGICAL JUDGMENTS, For the Year, 1665.

By William Andrews, Student in Astrology.

*Caeli enarrant gloriam Dei* —

IN delivering our Astrological Judgments upon this year 1665. I must not omit, but take notice now and then, as occasion shall be offered, of the Effects of the last Conjunction

## Astrological Judgments

tion of *Saturn* and *Jupiter*, now operating: For, as I told you last year, The Effects and Influence of that Conjunction would not immediately appear, but spend and manifest themselves by degrees, in many of the succeeding years; for, *Corpora Cœlestia non agunt in instanti, sed in tempore.* —

True it is, if we look back upon the Actions in the year 1664, in some Countries and Places of the World under *Sagittarius*, the Celestial Constellation wherein that eminent Conjunction happened, we shall finde that the Turk hath since the time of the Conjunction it self much molested *Hungary*, and much of the Emperours Dominions and Territories, and hath threatened the Invasion of *Christendom* with numerous Armies: We know that *Hungary* is under the before-mentioned Sign; and the fiery Triplicity hath much relation unto *Germany*, and the Imperial Countries; and therefore that Conjunction might well foreshew some disaters unto those Regions, as in truth it did. —

We have also observed, That the Spanish Nation hath already (I o) in some measure been sensible of some of the Effects of that Conjunction, as I did conceive they would, as I mentioned last year; they having (unto the time of the writing hereof) had very ill aduertisements in their actions against the Portugals: They have received several Losses, and hitherto have not been successful, nor are like to be for some time to come. — Indeed, the Configurations of the Stars do highly concern that Nation, even at the very beginning of this year 1665, *sed de hac re statis nimisque sursum.* —

The Eclipses of the Sun and Moon this year being some of them but small, as I told you in the description of them before in the first sheet; and the rest of them Subterranean, and so not visible in our Horizon, therefore the Influence of them will not be of any great force, or of much importance; I shall therefore pass the *ibid*, and hasten, according to my usual manner in former years, to speak somewhat (*Deo volente*) of the several Positions and Configurations of the Stars, at the Ingress of the Sun into *Aries*, *Cancer*, *Libra*, and *Capricorn*, this present year 1665.

for the Year, 1665.

In the fore-going Figure of the World, at the ingress of *Sol* into *Aries*, I find all the Planets Subterranean, and under the Earth; as if many clandestine and occult Actions and Designs would be on foot in many parts of the World. -- We have here in the Scheme *Saturn* in the second House, *Jupiter* near the third, *Cauda Draconis* in the second also; *Mars* is in the fourth, and *Mercury* in the third House; *Venus* is in the sixth, and the *D* is in the ninth House: four of the Planets are essentially fortified, *viz.* *Saturn*, *Mars*, *Venus*, and the *Moon*; *viz.* *Saturn* is in *Capricorn*, his own House; *Mars* is in *Pisces*, his own Triplicity, going into *Aries*, being within one degree and some odd minutes of that Sign; the *Moon* is in *Taurus*, her Exaltation; and *Venus* is also in that Sign, being her own House. -- Thus are the wandering Stars disposed at this Revolution, as you may fully observe by the foregoing Scheme.

If we judiciously observe this present Position of the Heavens, and look upon the Actions intended thereby to happen in the World this year, we shall find them to be much of the Nature of *Saturn* and *Mars*; and they are sometimes violent and turbulent; for here is *Mars* quickly after the Sun's ingress entering *Aries*, and is applying to a Quadrature of *Saturn*, *viz.* on the 23. of *March*, *Mars* being then in a furious and hasty Constellation. -- Astrologers do usually predict many Controversies, Contentions, Wars, Fights, &c. to happen in the World in that year when these two Planets are in  $\square$  or  $\delta$  at a vernal Revolution. I have fully examined the Position of these two Planets, *Saturn* and *Mars*, and I finde them strong; and therefore those Matters and things designed by them, and their before-mentioned Aspect, will be carried on and managed with great Vigour, Courage, and Resolution; and chiefly in those Countries and Places under *Capricornus*, *Pisces*, and *Aries*, will those good or bad Events signified by them be manifested.

Even just now, at the Ingress of *Sol* into *Aries*, will begin to appear the Effects of the Lunar Eclipse in *July* last year 1664. The Eclipse is self was total, therefore its Effects will be of

### *Astrological Judgments*

concernment, and very splendid, as I then told you; and we must expect them to operate in *March, April, May, and June*, this year (according to the Rules left us by *Ptolemy*) as I have mentioned in my Observations upon *March* this year: For the Eclipse continuing four hours, the Effects thereof will continue and be in force four whole Months, from the time of the beginning of their first operation. That Eclipse did signify (being in the airy Triplicity) a scarcity of provision for Mankind, and many unfortunate and cro's matters to arise and happen in the Laborious Country-man's Employment (for *Saturn* was Lord thereof) and that the Farmer in many Counties would be much affl'cted, by reason of sad weather, and cold and uncomfortable blasts, destructive to Corn, and the Fruits of the Earth: And truly the Configurations of the Heavens this year do seem to help forward and augment the Influence of that Eclipse, and do seem to declare, That there will be but very mean crops of Corn in many places this year, and that Corn will be dear: Yet here appears the Moon, who is the general Significatrix of the Commonalty, in the fifth House, in her Exaltation, as if people would follow their Employments lustily, and endeavour to live pleasantly, and labour to procure profit and gain unto themselves by their several Callings and Professions, and that the People shall be in good state and condition (in that year) when the *Mercury* shall be in an Angle, or succent House (as now he is). and in any of her Essential Dignities, as you may read in *Italy*, cap. vi. of his last Book, *De Gestis Afforum* —

I do proceed, and say, That this present position of the Planet *Mars* in *Fishes* a watry Sign, and so powerful in an Angle, doth seem to inform the World of many Sea-fights, or great Conflicts at Sea, and upon the Waters this year; as also great Naval preparations, and the setting out of several Fleets of Ships: And so almuch as he is removing out of one Sign into another, doth seem to import the motion of some Army or Armies, or that one Country will endeavour to invade another's Territories, and so the Soldier thereby will be employ'd, and that especially in the Eastern parts of the World, where

for the Year, 1665.

where War and many furious Actions may be feared, even in this very Spring Quarter, 1665. For it's very probable by the Configurations of the Stars at this Vernal Revolution, that in those Countries and Places lying Eastward, many Troubles or Controversies may appear; as also in the Southern Parts of the World; for the malicious Quartile of *Saturn* and *Mars*, is out of *V* and *W*, the one an Eastern, the other a Southern Constellation: And in a very especial manner will the Influence of this Aspect operate in those Countries, Cities, and Places under the two before-mentioned Signs: Besides, I find here a little after the Suns Ingress, th. Sun (also) himself applies (also) to a ☐ of *Saturn*, the Aspect happening in the same Signs of th. Zodiac before specified; as if the chief Actions intended by the Heavens at this Vernal Ingress, were wholly designed to be managed and carried on in those Countries and Places of *Europe* and other parts of the World, subject to those two Celestial Aspects, *viz. Aries and Capricorn*. — It's probable from hence, That the Emperors Dominions and Territories will not be wholly freed from Troubles; yet we do not find that the Turk will do any notable Exploits in th' Parts this year; we rather hope, That God will be pleased to put a stop to the Turks proceedings: If we that are Christians do but unite and agree amongst our selves, their power and strength need not to be feared: *Sicut Dem nobiscum, quis contra nos?* — It may be conjectured, That some disasterous events will befall the intolling Roman Family, whose Forces and numerous Armies may expect very slender success this year. True it is, we find *Germany* it self under *Aries*, and therefore it seems concerned by this square Aspect of the two before-named Planets; but *Mars*, the Lord of that Sgn, being strong and well fortified, doth seem to promise some good unto the undertakings and proceedings of the Germans, if Divisions and Enmity amongt their Great Ones, *viz. Generals, and their principal Officers and Commanders of their Armies and Forces*, hinder not, which may a little be feared; for *Sol* is also in Square of *Saturn*, as I said before. —

We do also find *France*, *Denmark*, *Sweden*, *England*, *Scotia* the higher, *Polonia* the less, and some other Countries more-

### Astrological Judgments

remote, under the Sign *Aries*; therefore undoubtedly in one kind or other, this hateful Aspect of *Saturn* and *Mars* will concern them.—*Capricorn*, the Sign wherein the Planet *Saturn* is, hath relation unto the *East* and *West Indies*; therefore from hence may be conjectured, That many notable Actions and Designs may break forth and be manifested in those parts of the World, even in this Vernal Quarter. The French will be very active, and many eminent matters and things may be carried on by those people in several places.—

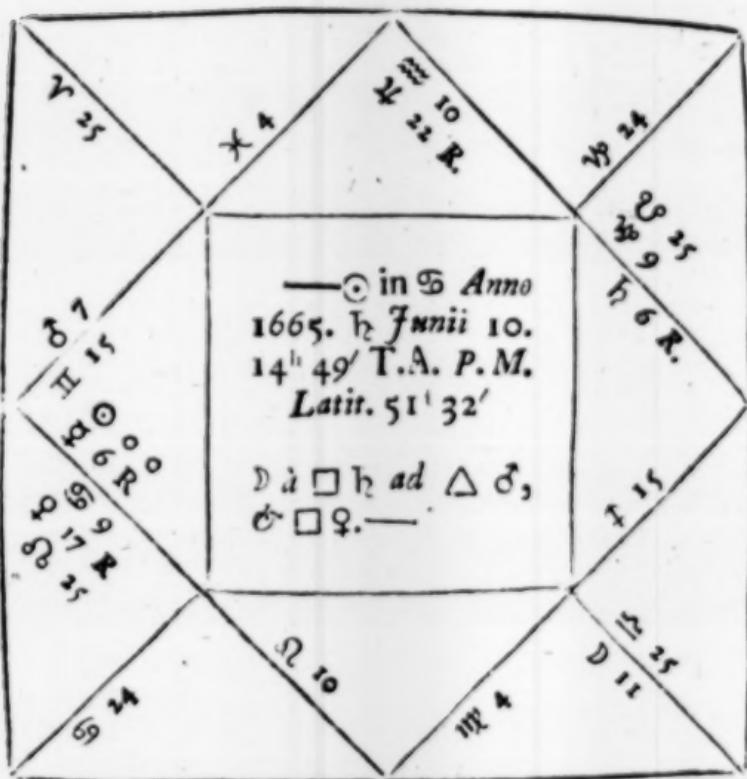

The potency of *Mars*, being Lord of *Aries* the Ascendant of *England*, doth sufficiently declare at this Revolution, That the English wil. terrifie and vanquish all their Enemies which shall appear against them in any parts of *Europe*; and that His most Sacred Majesties Forces and Navies will be victorious in their Achievements, and prosecute their busines with much Resolution, Courage, and Valour, if provoked by any of their perfidious, self-ended and unconstant Neighbours.—Nor doth the Position of the Stars at this Solar Ingrels promise only good to the Kingdom of *England*, but also in the Kingdom of *Ireland* much tranquillity and felicity seems also hereby signified; for we have *Venus* and *Luna* in the Sign *Taurus*, which doth very fully import much good unto the Kingdom of *Ireland* in general, and that they will be in a thriving condition, and receive comfort in their imployments, and have plenty of Corn, Grass, and Provision amongst them; for *Venus* and the Moon are excellently well posited, and free from the malicious Influences of the unfortunate and malevolent Planets; a good Omen to that Kingdom, and all His Majesties Subjects there. This position of *Venus* and the Moon, doth also seem to denote good success unto many other Countries under that Celestial Constellation, the *Polanders* may (perhaps) obtain some Victory against their Enemies, if any of those unruly people bordering upon their Territories shall molest them.

We have cause to hope that His Majesties Forces at *Tangier*, in *Afrique*, *Jamaica*, and some other of our English Forreign Plantations, may do some handson Exploits this year; for the Heavens seem to intimate much Action in those remote parts,—

for the Year, 1665.

as also in the East and West Indies. Quickly after the Ingress of the Sun into *Aries*, the Martial man in Foreign Countries will be busie ; and here seems signified by the Heavenly Configurations the besieging and beleaguering of some Towns, Castles, Cities, or strong Forts in the Eastern parts of *Europe* ; or much time spent about Fortifications, and such like actions, relating unto Garrisons and strong-holds ;— but this chiefly concerns the Emperors Dominions and Territories.— And lo I hasten to the Ingress of *Sol* into *Cancer* this year, intending (God assisting) to so low the Doctrine of the Learned *Ptolemy* in this years Observations, which he prescribes unto us in *Lib. 1. Cap. 9. Quadr.* where he saith, — *Mibi convenientius & naturalius esse videtur ut judicando eventus annuos, quatuor assumere principia : observans iis que proxime praecesserunt, Novilunium Solis & Luna, ac Plenilunium. & maxime si in quibus horum alterutrum Luminarium defecerit : atque ita judicium sacre de Hato veris ex principio Arietis, de Estate & Cancro, de Autumno à Libra, de Hicme & Capricorno.*— And he doth proceed also a little further, and gives the reason thereof, even in these words, — *Nam ipsas quidem universales constitutiones temporum & modis, sol parit : unde & penitus impediti Mathematicum prae noscunt futura.*— I confess *Haly*, *Lib. 8. Cap. 3. De Judiciis Afrorum* ; and *Guido Bonatus*, *Part. 4. Cap. 14* are of another Judgment, and do not fully agree with *Ptolemy* herein ; for, when a fixed Sign shall ascend at the Ingress of *Sol* into  $\vee$ , that Revolution shall then comprehend in it self (according to their opinion) all the four Quarters of that Year : And if the Ascendant shall be a common Sign (as now it is) we are only to erect two Figures, *viz.* one at the Ingress of *Sol* into  $\vee$ , and the other at his Ingress into  $\triangle$ . However I shall now adhere to *Ptolemy*, and shal proceed to the Ingress of the Sun into *Cancer*, whose Scheme doth here follow.

## Astrological Judgments

Here doth appear somewhat a turbulent face of Heaven at this *Æstival Ingrels*; for we have the Sun hastning to an opposition of *Saturn*, the one being in *Cancer*, the other in *Capricorn*: Besides, we do find very many malicious Configurations of the Stars to happen in *July*; so that this Summer-Quarter, 1665. will make manifest many notable things in some parts of the World; for the Aspects of the Heavens are of great importance, and may well declare Actions of no mean or slight Consequence.

We have here in this Figure the fifteenth degree of *Gemini* ascending in our Horizon, and the tenth of *Aquarius* culminating;

for the Year, 1665.

nating; *Saturn* is in the eighth House, Retrograde; *Jupiter* in the tenth House, Retrograde; *Mars* in the twelfth; *Sol* in the first, just rising; *Venus* in the second, Retrograde; and *Mercury* also is posited therein Retrograde:—*Cepus Draconis* is in the second likewise, and *Cauda* is in the eighth House:—*Mercury* is in partie opposition of *Saturn*, and then quickly applies to the Conjunction of the Sun: The Sun hastens (as I said before) to the opposition of *Saturn*; and *Venus*, by her retrograde Motion, comes quickly to a Conjunction of the Sun; and *Mars* and *Jupiter* are appling to a trine Aspect.—Thus are the Heavens disposed at the Ingress of *Sol* into *Cancer*;—and by this their position they do declare sundry and various matters to happen in the World in the Summer, especially in those parts under *Cancer* and *Capricorn*.—

No less than four of the Planets are Retrograde, *viz.* The two superiors, and the two inferiors; as if there would be much dulness and slowness in the management of the grand affairs of the World, and much backwardness in the publicke Negotiations of many Forreign Countries, whereby much detriment may arise unto some Regions and Cities under the two before-mentioned Constellations of Heaven, *viz.* *Cancer* and *Capricorn*. *Mercury* is Lord of the Ascendant, and he is afflicted by *Saturn*, and he is Lord of the eighth, ninth, and tenth Houses in the Figure, and now posited in the eighth Hour, which is termed by the ancient Astrologers *Dormus Mortis*,—being of a very malevolent nature; and *Saturn* also, by being Retrograde, made much unfortunate:—So that from hence we may fear, that the youth or young people in several Countries will even in this Summer be afflicted with sundry sorts of distempers in their Bodies, of the nature of *Saturn*, *viz.* cold and dry; for he is also in an earthly Sign; the Diseases and Sickneses which he doth usually signifi: are, Agues Col. s, Coughs, Consumption, Melancholy Diseases, and such as are of a long continuance; and in regard he is in the eighth House, he doth seem thereby to prenote a mortality, or death of people, and that many people will be oppresed with many tedious Diseases, which will destroy many, and bring many people to their graves;

## Astrological Judgments

graves; but still *Mercury* hath relation unto the younger sort of people, therefore we may conjecture that the youth will suffer, and many Children: Strange and unusual Coughs and Colds may seize upon many people, even in this Summer, to the great discomfort of them, even in many places, &c.

The more I observe this present position of Heaven, and view the Configurations of the Wandering Stars at this Solar Ingress, the more cause I have to judge of some sad disasters to happen and break forth in some Countries, Places, and Cities in the Northern Parts of *Europe*; for, *Cancer* is a Northern Sign; and many of the Planets are very much molested and disquieted in their passage this year, through that Sign, by the opposite Aspects they have with *Saturn*; therefore those Countries subject to that Sign seem very much hinted at by the Celestial Bodies. The City of *Constantinople* will undoubtedly be sensible of some sad Calamity; for we do believe, that near unto the Ingress of the Sun into *Cancer*, or in the Months of *June*, *July*, or *August*, some disturbances will appear in that City, and that the Turks themselves will be notably concerned near those times, both in *Algiers*, *Tunis*, and several other places of their Dominions; for it's very probable that there will be much Action in those places, and upon the Coasts of *Barbary*, and that the *Algier* Pirates will sufficiently smart for their former miscarriages.— The Hollanders in their several Negotiations and Transactions this Summer, 1665, are much pointed at; and the Heavens do intimate, that many Inundations, over-flowings of the Sea banks, or such like sad misfortunes, may be feared Northward, or North east; *Holland*, *Zealand*, and some other of the United Provinces, are hereby threatened; for often when malicious and turbulent Aspects of the Stars happen in watery Asterisms, the irruptions of the Sea may be feared, or sudden and violent Actions upon the Seas; Sea-engagements, or Conflicts at Sea, Shipwrecks, Piracies, &c.

True it is, in all or most of those Regions under *Cancer*, some considerable Actions seem signified;— yet *Venus* and *Caput Draconis* being in that Sign, may import things of a more calm nature: Besides, *Mars* and *Jupiter* are applying to a trine

Aspect,

for the Year, 1665.

Aspect, which may declare serene matters, and that the inclinations of the minds of many Nations would be for peace and quietness, and that many Treaties will be on foot, and that many sober and learned Persons in Foreign Countries will endeavour to bring some Nations to amicable agreement.

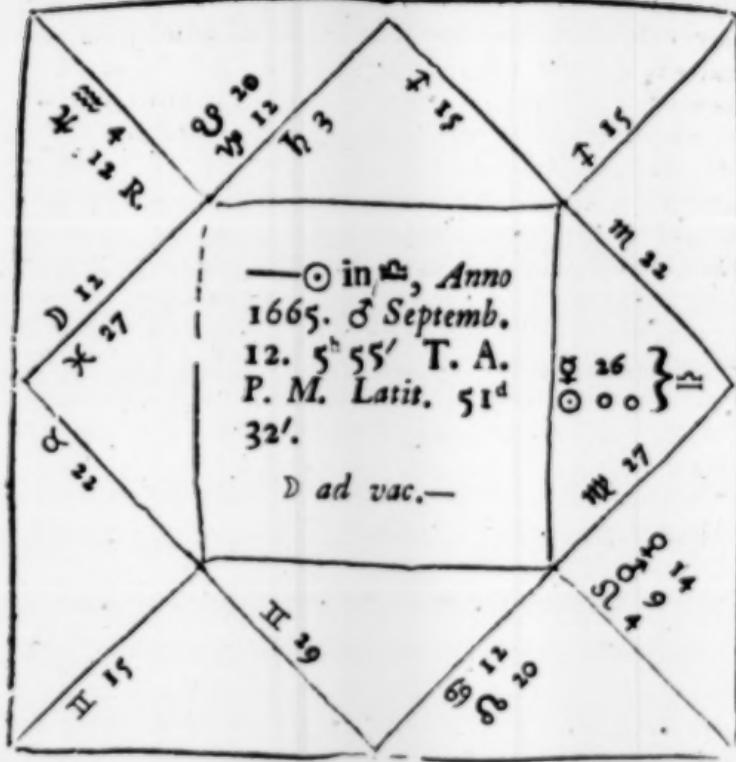

However, from the former face of Heaven we may have sufficient cause to mistrust, that the Country-man, in many places, will suffer much by unseasonable weather, and that many sad Floods, or hasty showers of Rain, will hinder the laborious Farmer in the getting in of his Hay in *July*, whereby he may receive prejudice, especially Northward; many cold and uncomfortable storms of Hail and Rain may be expected even in this very *Aestival Quarter*.

Amongst the many Places and Cities under  $\mathbb{G}$ , I find *Venice* in *Italy* also under that Constellation; therefore the Venetians, in their Sea-affairs, in one kind or other will perhaps partake of the Influence of the Stars at this Revolution; and so will the Dutch, whose Fleets and Ships will be often in danger, and many sad misfortunes will attend them, unless they comply with *England*.

The Moon is in *Libra* at this Ingress of the Sun, and she separates from a Quartile of  $\mathbb{H}$ , and applies next to the Trine of *Mars* — and then to the square of *Venus*; this seems to intimate some difficulty in humane affairs; for the Moon is much to be considered in every Revolution, in regard she often receives the virtue and influence of the other Planets, and transfers the Light of one Planet to another; and as she now carries the Light of *Saturn*, who is Lord of the eighth House, unto *Venus*; so she doth thereby seem to confirm that which I even a little before delivered, viz. that many people will yield their Bodies to the grave: For the Moon, according to *Haly*, is the general Significatrix of the Commonalty; and she is disposed of by *Venus*, Lady of the sixth House, and doth also next after the Ingress hasten to the  $\square$  of the same Planet, arguing a sickly time to women. — But I proceed to the Ingress of *Sol* into *Libra*, at which time the Heavens represent themselves in this manner.

The

## Astrological Judgments

The 27. degree of *Pisces* is here ascending, and the 29. degree of *Sagittarius* culminating: The Angles of the Figure are possessed with common signs; *Saturn* is in the tenth House, *Jupiter* in the twelfth, *Mars* and *Venus* in the sixth, *Sol* and *Mercury* in the seventh; the Moon is also in the twelfth House, *Capsus Draconis* in the fifth, and *Cauda* in the eleventh: Immediately after the Ingrefs of *Sol* into *Libra* the Sun comes to the Square of *Saturn*, and *Mars* applies to an opposition of *Jupiter*, and *Mercury* hastens to a Sextile of *Saturn*, and the Sun quickly separates from the  $\square$  of *Saturn*, and applies to a  $\Delta$  of *Jupiter*. Here are all the Planets direct in motion, unless *Jupiter*, and he is Retrograde.— The Planets themselves are very meanly fortified at this Autumnal Ingrefs; we find *Saturn* to be strongest, he

being

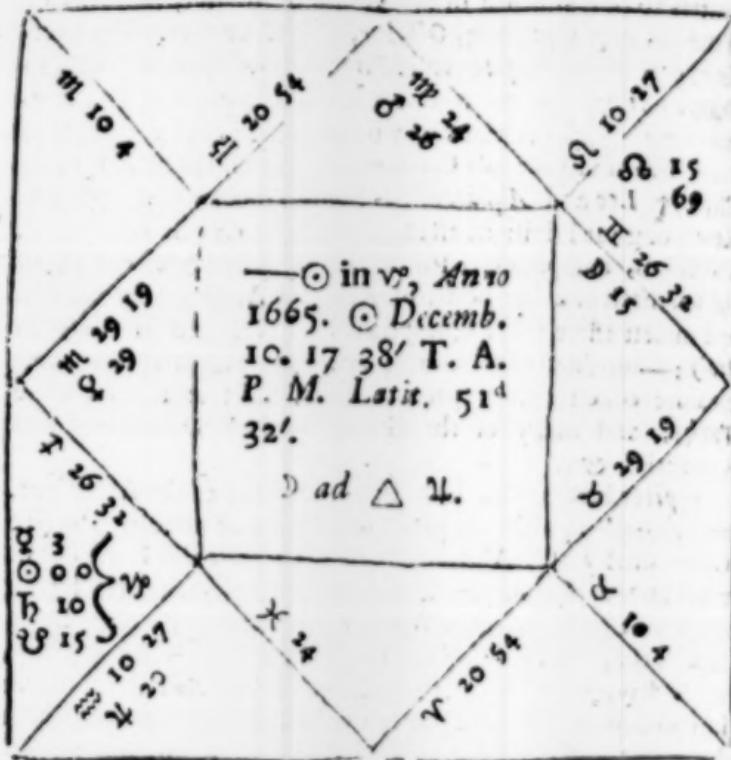

for the Year, 1665.

being in his own House, *viz.* *Capricorn*, and in an Angle, *viz.* the tenth House.—Therefore I cannot discover any notable matters to be manifested in the World in the three moneths of Autumn, *viz.* *September*, *October*, and *November*. However, the opposition of *Jupiter* and *Mars* before-mentioned seems to threaten *Italy*, and the places adjacent, with popular *Tumulus*; and many unquiet Actions may break forth in those Countries and Cities under the two Constellations in which the & happen-  
eth, *viz.* *Leo* and *Aquarius*:—Some Troubles may appear at *Rome*, or great Divisions and Controversies may be amongst the Cardinals, and principal Persons of the Church of *Rome*; or the approach of some powerful Army or Armies may disquiet and molest those peoples happiness bordering neer the *Alps* in *Italy*;—for the celestial Configurations this Quarter do in some measure concern those parts of the World; as also a part of *Turky*, and many of the Grand Signior's Dominions and Countries, &c.

*Jupiter* here in this third Figure is Lord of the Ascendant, and to doth signify the particular state and condition of the Commonalty this Autumnal Quarter; he is also Lord of the tenth House, and *Mars* and he are disturbing each other by an opposite Aspect, being an Aspect of perfect hatred, *Mars* being now in the sixth House, in a choleric, hot, and dry Asterism, which have very eminent signification, and doth seem to give intimation unto mankind of an unhealthful Season, or that in Autumn, and in the three months before-specified, many pestilential Diseases would afflict many people in several Countries: The Sickneses and Distempers incident unto mans Body this Quarter, are designed to be much of the Nature of the Planet *Mars*; and they are usually of a violent hot nature, as Pestilential Fevers, Surtises of the Liver, the over-heating of the Blood, the P<sup>o</sup>ague or Pestilence it self, (which God in mercy di-  
ven); It has been in *Amsterdam*, a City of the Low-countries, very much this last year, 1664. and hath swept away some thousands of People; and hath also broke forth in some other parts of *Holland*, and the United Provinces, to the great prejudice of those Countries also in their Trading into several Parts of the World.

*Astrological Judgments*

World.— I now come to the Suns Ingress into  $\text{V}\text{I}$  this year 1665, being the last and fourth Figure.

Wherein I find *Saturn*, *Sol*, *Mercury*, and the *Dragons Tail*, in the Second House. *Mars* in the tenth, *Jupiter* in the third House, *Venus* in the Ascendant. *Moon* in the seventh, *Dragons Head* in the eighth; the *Moon* is also applying to a  $\Delta$  of  $\text{V}$ . I shall not much enlarge concerning this present position of Heaven, at the Suns Ingress into *Capricorn*, in regard & happeneth just almost at the very latter end of the year, so that these things intended unto the World thereby, will be manifested in *January* and *February*, 1665. Therefore I do here draw near unto conclusion, and do say, That the Conjunction of *Saturn* and *Mercury*, and *Sol* and *Saturn*, the one at, and the other quickly after

for the Year, 1665.

after the Sun's Ingress, doth foreshew a cold and cloudy Winter, and that the weather will be very sharp; and many Merchants will be very much concerned in their Traffick into several parts of the World, especially into the East and West Indies, in which places it is very probable, by the several Positions and Configurations of the Stars this year in all the four Schemas, that some more than Ordinary Actions will happen, in which many Nations will be somewhat concerned.— Besides, the Sun being Eclipted in December (which Eclipse I have formerly mentioned) may, for ought I know, have some eminent signification, though not visible amongst us. It will appear very great in the Southern Parts of *Africa*; and it happeneth in *Capricorn*, and may well signify things of importance unto several of those places under that Asterism, and to the People inhabiting in *Jamaica*, *Barbadoes*, and some other Foreign Plantations, &c. &c. I confess *Ptolemy*, *Origanus*, and many of the ancient Astrologers, were generally of this opinion, viz. That the Eclipses of the Lunaries did not operate upon any Region or Country where they were not visible: However, this Eclipse (though under the Earth) being a very great one, may have relation unto many Countries and Cities of *Europe*, where it will not be visible; and *Leouistius* I suppose might find some cause to dissent from *Ptolemy*; for he hath given judgment upon the Effects of many Eclipses, when under the Earth: But the Sign wherein this defect of the Sun happeneth, being such an one as has relation unto remote Countries and Regions, I shall take the less notice thereof: moreover, whatever it portends, it will not have its Effects operate until the next year, 1666.

The Moon applying unto a Trine of *Jupiter*, in this very last Figure, seems to tell us, that the year will end well, and that peace and quietness in many parts of the World may be expected, and a serene and comfortable time towards the years end: For although the Configurations of the Celestial Bodies, at the Ingress of the Sun into *Aries* and *Cancer*, did seem to declare in any troublous and violent Actions, to happen in the Vernal and Æstival Quarters of this year, 1665, in many Kingdoms and Countries of the World, yet I have cause to hope, that there will be a better under-

*Astrological Judgments for the Year, 1665.*

understanding between some of the European Countries, and more unity and concord amongst many People in the World, towards the latter end of this year. Nor do we think that the next year, *viz.* 1666. will be such a prodigious year as many have conceived, although it has been a year much hinted at; and, in truth, some matters of great concernment may then be manifested in sundry parts of the World: Some have thought that the City of *Rome* will be then subject to some sad Catastrophes and Mutations: However, *Pope Alexander* the seventh is yet alive, at the time of my writing hereof, and *Rome* stands in the very same place where it did, and so it may after the year 1666. True it is, in that year the Effects of the Conjunction of *Saturn* and *Jupiter* will somewhat operate; but we do hope the matters and things intended and designed from thence, to break out and be manifested in the World, will be rather tending to peace and quietness, than to the creating and begetting of Troubles in any Kingdoms, Countries, or Cities in Europe. True it is, I had formerly thought to have written a particular Treatise of that Conjunction, and its Effects; and indeed, I did as it were mention as much in some former years; but being informed, by a Letter from *London*, (just at such time as I was engaging upon that subje<sup>c</sup>t) That an *Artist* about that City had undertaken that Labour, I did forbear. — I shall proceed no further, only desiring you modestly to pass over the errors of the Press, and civilly to correct the faults which may happen in the printing hereof. God bless his most Sacred Majesty. All happiness to *England*, *Scotland*, and *Ireland*.

*sapiens dominabitur astris  
Dum se consilio, non fatorite gubernat.*

*Aug. 29. 1664.  
Æt. mea 29.*
